

## OEM/Private-Labelled Industrial LCD Monitors

*TRU-Vu industrial* LCD monitors offer a wide range of sizes, features and capabilities. They are used in very diverse applications and industries. Despite this, we realize that our standard monitors cannot possibly meet everyone's requirements for every project. Therefore, *TRU-Vu* monitors offer you the unique capability to customize any model with the features, functionality and capabilities that you need. These can be minor modifications, complete overhauls, or brand-name designs built from scratch. Once your design is complete, it will receive a special 3-digit custom number which identifies it as your product; it will only be sold to you. This protects your intellectual property, and ensures that you enjoy the fruits of your labors.

There are practically no limits to what we can provide. *TRU-Vu* monitors can be combined with a variety of hardware and/or software to create unique and innovative solutions. From integrated cameras, card readers, and RFID scanners, to embedded p.c.'s, waterproof enclosures, and more.

Once your product is designed and developed, we can also private-label it to your specifications with your own logo, product number, labeling, color, etc.
