

Portable/Field Monitors

Field engineers, service technicians and installers utilize small, portable monitors to install, focus and/or adjust cameras. Unfortunately, many of the available monitors are too small or the resolution is too low to produce a true representative image. This makes it difficult or nearly impossible to obtain optimal focus.

TRU-Vu's two portable monitors may be the optimal solution. The PM-5K features a 5.5" color LCD monitor in a carrying case. The PM-8K includes a 8" color LCD monitor, battery, battery charger and neck strap in a carrying case.

For OEM quantities, we can also offer a 7" color monitor with a metal housing and carrying case.

Data sheets will be available shortly.
