

Sunlight-Readable/High Bright LCD Displays

TRU-Vu industrial monitors also include Sunlight-Readable (High-Bright) LCD displays. These are specifically designed for use outdoors and in very brightly-lit areas. These monitors have exceptional brightness (up to 1700 nits), ensuring that text and/or video messages can be easily seen under any conditions.

The Sunlight Readable displays are available with a wide range of features, and options, including touchscreen, waterproof enclosures, 6" to 42" screen sizes and more.

High-Bright monitors have been successfully deployed for digital signage, marine, kiosk, mobile, in-vehicle, police and military, ATM, gaming, gas pump, advertising, handheld devices, transportation, HMI, medical and other applications.
