

Custom/Private-Labeled Industrial LCD Monitors

TRU-Vu industrial LCD monitors offer a wide range of sizes, features and capabilities. They are used in very diverse applications and industries. Despite this, we realize that our standard monitors cannot possibly meet everyone's requirements for every project. Therefore, **TRU-Vu** monitors offer you the unique capability to customize any model with the features, functionality and capabilities that you need. These can be minor modifications, or complete overhauls. And once your design is complete, it will receive a special 3-digit custom number which identifies it as your product; it will only be sold to you. This protects your intellectual property, and ensures that you enjoy the fruits of your labors.

There are practically no limits to what we can provide. From cameras, card readers, RFID, scanners, p.c.'s, IP capability and more. **TRU-Vu** monitors can be combined with a variety of hardware and/or software to create unique and innovative solutions.

Once your product is designed and developed, we can also private-label it to your specifications with your own logo, product number, labeling, color, etc. Clinton Electronics has been doing this for major brand names for over 40 years!

Please click [here](#) for our "Clinton Monitor Specification Form". This is the first step in specifying all the features and performance you would like in a TRU-Vu custom monitor solution.
