

Top 10 Reasons To Choose *TRU-Vu* Monitors

1. RUGGED

TRU-Vu monitors are designed for demanding industrial/commercial applications. They utilize industrial-grade components to ensure long-term, reliable performance and 24/7/365 operation.

2. EXCELLENT IMAGE QUALITY

We utilize grade-A LCD panels, high-end image processing boards and superior graphics engines to ensure bright, sharp images and vivid colors. We also offer optically-bonded and sunlight models to ensure excellent viewability even in bright, direct sunlight, where standard monitors may be totally unusable.

3. EXTENSIVE SELECTION

TRU-Vu monitors are available in a wide range of styles, configurations and sizes:

- Standard Enclosures
- Touch Screen
- Sunlight Readable
- Panel Mount
- Mobile/Portable
- Medical-Grade
- 12 VDC, 24 VDC, 100-240 VAC
- Open-Frame
- Rack Mount
- Optically Bonded
- NEMA 4 Waterproof
- Flip-Down
- With Embedded Computer
- 4:3 and 16:9 Aspect Ratio

4. CUSTOMIZABLE OR CUSTOM-BUILT

TRU-Vu monitors can be customized or modified to meet your exact requirements. From face treatments and enclosures to video inputs and special features, just tell us what you need. For truly unique OEM needs, we can custom-build a monitor to your specifications.

5. PRIVATE-LABEL

Monitors can be private-labeled with your company name, logo, and model number on the monitor bezel, rear label and shipping carton.

6. LONG-TERM AVAILABILITY

A common problem for OEM's is that retail/consumer-grade monitor models are discontinued every 3 to 12 months. **TRU-Vu** can guarantee long-term availability (3+ years) for OEM models.

7. 3-YEAR WARRANTY

All **TRU-Vu** monitors 7" and larger carry our full 3-Year Warranty. An Advance Replacement Program is available for OEM's. Competitors' warranties generally range from 6 to 12 months, but industrial/commercial use voids many retail/consumer-grade monitor warranties.

8. WIDE VIEWING ANGLE

Our monitors can be viewed by multiple people simultaneously, thanks to viewing angles of up to 178°, both vertically and horizontally. Retail/consumer-grade monitors are designed as desktop computer monitors, assuming a single viewer seated directly in front. Typical viewing angles are 100° to 150° horizontally, and 100° to 125° vertically (with some dead spots in between).

9. DEMO SAMPLES

Don't just take our word for it, try it!. Demo units are available for you to test, evaluate and compare any of our monitors.

10. U.S. OPERATION

TRU-Vu operations are based in the U.S.: product design, engineering, technical support and inventory. We eliminate all the potential problems of dealing directly with an offshore supplier (language barriers, shipping delays, inconsistent quality, lack of inventory, no service or support, currency fluctuations, etc.)
